A Cleveland Clinic research trial is first in the United States to offer uterus transplant to women suffering from irreversible infertility (UFI). These women cannot carry a pregnancy. They were born without a uterus, have lost their uterus, or have a uterus that no longer functions.

The breakdown of care:

- **Evaluation and selection**
  - Cleveland Clinic’s Uterus Transplant Study will include 10 women.
  - Each candidate will include 10 women. Cleveland Clinic’s transplant study will include 10 women.
  - The organ procurement agency searches for a donor 18-40 years old.
  - The next-of-kin must sign an informed consent.
  - The donor’s uterus must be healthy.
  - The organ procurement agency searches 18-40 years old.
  - The next-of-kin must sign an informed consent.

- **Transplant phase**
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.

- **Pregnancy**
  - After hysterectomy, the anti-rejection drugs are stopped.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.

- **Pregnancy follow-up**
  - After 1-2 healthy babies are born, the anti-rejection drugs are stopped.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.

- **Criteria**
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.

- **Follow-up**
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
  - The uterus is transplanted into the woman’s pelvis. The donor’s blood vessels are connected to hers.
